

## Adtraxion Break

A special module that allows you to interrupt a running schedule and show different content.

Also you can change text fields on the fly by simple enter new text and push a button which updates the displayed content. This could be very useful for instance in a reception application

You can create your own graphic interfaces to match your house style. Graphics, pictures can be easily imported. Buttons can be freely placed in any size and position. Graphics can be assigned to a button to create intuitive operation.

The Adtraxion break has a fully graphical interface which can be tailored to the needs of the customer/application.
